# New range of acoustic panels utilised as wall panelling and divider screens

Acoustic panelling has taken over modern interior spaces in recent years, with its no-compromise solutions to functional and eye-catching interior design.

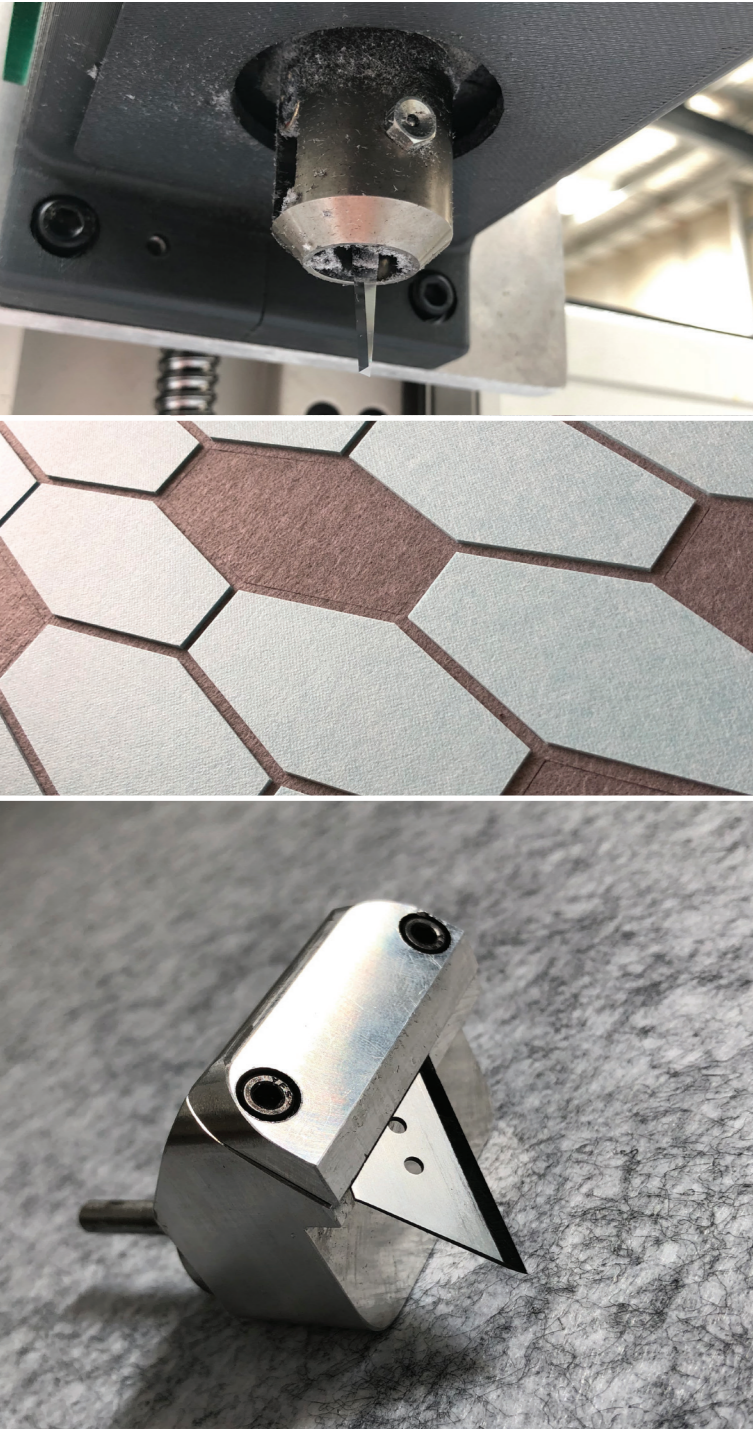

We stock a range of acoustic panel options; in a variety of sheet sizes and colours that can be cut to order locally in our Melbourne factory.

Acoustic panelling can soften a room and dampen noise by reducing reverberation from hard surfaces.

# Pattern Examples

CHOOSE FROM AN EXISTING RANGE OF CONTINUOUS PATTERN DESIGNS, DRAWN WITH CONSIDERATION TO BOTH STANDARD SHEET SIZES AND CUTTING TIME, ADJUST ONE OF OUR DESIGNS TO BETTER COMPLEMENT YOUR SPACE, OR SEND US A DXF FILE OF YOUR CUSTOM DESIGN.

Featuring a dual-function tangential/oscillating head, our state of the art CNC knife will cut through PET as well as just about any acoustic panel ranging from 6mm to 50mm thickness. A 45 degree knife head also enables us to cut V-grooves, mitred/bevelled edges, and corner folds in material up to 12mm thick.

Pattern examples of some of the designs we can create. There is no limit on possibilities, if you can draw it, we can cut it!

Screen: PET #17 charcoal & Woven Image, Echo Panel '487'

## Divider, modesty & slide-on screens

Workstation screens have already proven to be an essential aspect of any office space, and are a functional necessity now more than ever. Corner folds can be achieved using the 45 degree knife tool, while patterned cuts allow bends to wrap worktops with radius corners.
